Mathematics and Computer Science Division

Technical Memorandum No. 167

July 1992

*Present address: Department of Mathematics, Statistics, and Computer Science, Marquette University, Milwaukee, WI 53223

This work was supported by the Applied Mathematical Sciences subprogram of the Office of Energy Research, U.S. Department of Energy, under Contract W-31-109-Eng-38 and through NSF Cooperative Agreement No. CCR-8809615.
Automatic Differentiation Bibliography
compiled by George F. Corliss

This bibliography was originally published in *Automatic Differentiation of Algorithms: Theory, Implementation, and Application* [Grie91e] as the common bibliography for all of the papers in that volume. Each author prepared a bibliography for her or his own paper. The separate bibliographies were merged into a single BibTex database, and references from several other sources were added. Especially valuable contributions were made by bibliographic data bases previously compiled by Bruce Char, by David Gay, and by Davis, Corliss, and Krenz [Davi88a]. Additional works are added as they come to my attention.

This bibliography includes most of the work known to the editors in the area of automatic differentiation. Because it includes all of the works cited by any paper in [Grie91e], it includes many citations that are not directly related to automatic differentiation. For example, it includes basic references in optimization, symbolic algebra systems, and several applications areas.

The file `all.brec.bib` is a standard BibTex data base. It assumes commands to get Russian digraphs:

\newcommand{\Yu}{(Yu)}
\newcommand{\Ye}{(Ye)}
\newcommand{\Ju}{(Ju)}

This report is produced by the file `all_cite.tex`.

The electronic version of this bibliography is available from netlib (netlib@research.att.com) and by anonymous ftp from boris.mscs.mu.edu (134.48.4.4) in directory pub/corliss/Autodiff. Corrections and additions are welcome and should be sent to
